## Emerging Technology Affecting in College Library Services : In Digital Era

**Shri. Samir S. Kulkarni**

Librarian

Arts Commerce and Science

College, Gadhinglaj.

### Abstract:

*The rapid acceptance of e-publishing and enormous growth of electronic resources have created new challenges and opportunities for libraries. Libraries are constantly evolving to meet the needs of their diverse communities. Far from being a simple repository of books and media, today's libraries serve as invaluable resources for everything from data analytics to 3-D printing and beginning lessons in coding.*

*This paper demonstrate all the existing issues related with Digital Resources collection currently available and emerging technologies. In 2018 and beyond, it's critical for the modern library to take in the changing faces of its patrons and respond accordingly. Every demographic is different, but there are countless ways that the modern library can respond to recent trends and offer information and resources that are both innovative and relevant to its users. It is an attempt to highlight the main issues about the e-resources.*

**Keywords:** Emerging Technology, College Library, Library Services, Digital Era.

**Technology:** Library services are increasingly migrating to the digital environment in both the building of collections and in patron interactions. The significant differences existing between objects, printed material, and even buildings or landscapes in the material world blur in the digital environment.

Organizations of all types struggle with the organization, retrieval, and analysis of information, the types of technology needed in this ever-expanding environment, how to best interact with users, and how to ensure privacy and cyber security.

Working in this environment requires a focus on the technical and usability aspects of building digital platforms for users, an understanding of metadata, an ability to create and manage digital content, an understanding of information architecture, good project management skills, an awareness of and a focus on the user experience, and an understanding of cyber security and digital privacy

There is a close relationship between the Digital Services and the Emerging Technologies pathways. The Digital Services pathway focuses on the technical and usability aspects of building digital platforms for users. The Emerging Technologies Issues and Trends pathway focuses on the user experience now and in the future.

Given that the main mission of libraries is to offer equality of access to information for every citizen, then why not be a trendsetter in digital use and implement more emerging technologies? As Mogens Vestergaard, Manager of Library and Citizen Service at Roskilde Libraries in Denmark emphasizes in our interview here, "it is the library's obligation to be at the edge of different uses of culture and uses of technology".

This article presents a range of relevant and useful innovative technologies to implement at the library. We focus on the technology's applicability and the benefits it could bring to the library.

questioning why the library was competing with DVD rental companies (although, as it turned out, Blockbuster had bigger problems than our local libraries).

**Conclusion :**

Majority of libraries in india do not have computer facilities. The print media is still a major source of information in libraries. Due to coming of new emerging online source and services the reference source and services move towards the new digital era their by information provide up to date and good quality, it saves a lot of time of user and as well as readers.
